

XL Series 120/34

High capacity weed control using 100% hot water

**WEED CONTROL
WITH 100%
HOT WATER**

**Best value
for money**

**Environmentally
friendly and
sustainable**

**Suitable for
all surfaces**

WAVE WEED CONTROL

All things considered the best in weed control.

WAVE offers the best value

The WAVE machines have been developed for weed control in the open air. Through the use of hot water in combination with low expulsion pressure, WAVE is suited to all paved and semi-permeable paved surfaces. The wheel pressure of the mounted machines can be lowered through the use of special tyres. Even treatment of artificial

grass is possible. Targeted work can be done with the low expulsion pressure right up to the outer wall without damage being caused. The hand-operated side sprayers facilitate treating weeds next to outer walls, fences and in the gutter.

Benefits of the WAVE XL Series 120/34

- Environment-friendly, efficient, effective, durable
- Proven technology, upgrade possible to Sensor Series
- Equipment carrier of choice
- 100% water, no additives with the exception of lime binder (cost-cutting)
- No extra sweeping round needed after use
- Weeds stay away longer and are suppressed over the longer term as the plant becomes exhausted
- Weed control possible on any type of (semi-permeable) paved surface right up to the outer wall
- No damage to paving, urban furniture or private property
- Can be mounted/dismounted within two hours
- Operate in comfort and safety from a cabin with air-conditioning (depending on equipment carrier)
- Extremely economical in water and energy consumption through heat exchanger, efficient burner control and dosing in separate sections
- WAVE method: individual advice, training and independent monitoring possible

Standard specifications

- Capacity: 120 ha per season
- 34 litres hot water per minute
- 5,000-10,000 m² per day
- Drive/heating: Hydraulic/diesel
- Operating width: 1.40 metre dosing system distributed over seven independently operated sections of 20 cm
- Working pressure for cleaning: 130 bar
- Working pressure weed control: 0-2 bar
- Maximum driving speed: 25-80 km/h (depending on equipment carrier)
- Operating speed: 0.8 km/h (100% weed cover)
3.5 km/h (with very little weed cover)
- Burners: 2 (diesel)
- Emission class high efficiency heating boilers: > EURO 6
- Burner tank capacity: 105 litres
- Water tank capacity: 500 - 1,200 litres (depending on equipment carrier)
- Side shift (45 cm to left and right)
- Standard colour rear mounting: RAL 9006

Options

- Rear view camera
- High-capacity surface water pump system (incl suction set) (500 litres/min) + furnished with dirty water filter with extremely high capacity
- High-capacity side sprayers
- Fast Forward operating width (60 cm: 3 x 20 cm)
- Hand-held lance with four-metre hose or 12 metres on reel
- Special lawn tyres for low wheel pressure
- Support legs for dismantling
